

TULIP NEEDLES

- Easy-to-thread needle eye
- Flexible body
- Needle point for smooth piercing
- About needles with Superior Polished Finish, we polish the needle lengthwise in streaks to minimize the contact surface with the fabric

Sewing Needles

TULIP NEEDLES

Large needle eye, flexible and warp resistant, runs smoothly through fabric

The main features of Tulip needles are their smooth fabric piercing and their flexibility. We have more than 30 processes to make sure that each of our needles is safe and high quality. We know you will be satisfied with the smooth fabric piercing of Hiroshima Needle, which account for 90% of the total national production of sewing needles and are favored around the world.

"TULIP NEEDLES" received Special Prize of the 14th HIROSHIMA GOOD DESIGN AWARD.

"TULIP NEEDLES" were certified as "The Wonder 500".

Needle Point

Smooth piercing enables easy sewing

It is the shape of the needle that, to some degree, determines your stitching. Tulip's needles, with the strength and durability of steel, are ideal.

Needle-eye

A quality eye that prevents snagging

The ideal shape of this needle, along with its beautifully made eye, which is large and allows for easy threading, are its main features.

Body

Smooth, difficult to bend or break

This needle is a product of Tulip's highly detailed precision-processing technology, which makes use of state-of-the-art fields such as machine testing. Our special processing and surface treatment have produced a body of ideal strength that is smooth.

How are needles made?

① Straight cut

The steel wire is stretched straight and then cut to the length of two needles.

➡ ② Point grinding

Sharpened gradually by repeated grinding.

➡ ③ Head shaping

After the eye has been stamped, a hole is made while the section of wire is split into two needles.

➡ ④ Round grinding

The two sides of the eye are known as the "ears." The ear grinding process results in a clean head with no bulges.

➡ ⑤ Hardening & Tempering

This is a critical process that gives the needle its hardness and elasticity.

➡ ⑥ Drum polishing & Cleansing

The needle roll is filled with the needle, polishing agent, and oil, and is rotated forward, back, left, right, up, and down in order to polish the surface.

➡ ⑦ Point sharpening

Points gradually sharpened by repeated grinding.

➡ ⑧ Nickel plating

The needle is plated with nickel. Depending on the specifications, the head may be plated with gold.

➡ ⑨ Inspection

At Tulip, we inspect the eye of every needle.

Sewing Needles

TULIP NEEDLES

Sewing needles of 74 types meet the needs of a wide range of users, including beginners and professionals.
