

# Knitting Needles

**CarryC** **CarryC** *Long*

## Advanced knitting needles!

Tulip's circular knitting needles can be used in three ways (as circular knitting needles, single point needles, or double point needles).

**Knina swivel** Knitting Needles  
**Knina Metal** Knitting Needles

### The cable is light and swivels, reducing wrist strain while knitting.

While knitting, the knitting needles receive the increasing weight of the knitted fabric throughout their length, resulting in strain on knitters' wrists and fingers. This knitters' problem has been resolved.

The swivel cable can fix a twist automatically.

\* The Knina Metal Knitting Needles' cable does not swivel.

Knitting with circular needles reduces the weight felt by the knitter!

### Knitting needles

Single point needles receive the weight of the knitting throughout their length.

Designed by Kazuko Murabayashi

### Good for carrying half-finished knitting

Long single point needles are not easily portable. On the other hand, half-finished knitting with circular needles is compact in size and good for carrying.

### A single circular needle allows you to knit as if you were using a variety of knitting needles.

#### To use as single point needles

Flat knitting can produce knitted fabrics in various widths for multiple items, ranging from scarves to sweaters.

It is easy to knit a long shawl which requires many stitches.

### Flat knitting

#### To use as double point needles

Magic loop knitting by using an 80cm or longer cable enables circles in various sizes to be knitted, including small circles for gloves and large circles. The soft cables for products in Carry and Knina series are perfect for magic loop knitting.
